🔗 B3lhadj

Final-year software engineering student specializing in web and mobile app development. Experienced in building scalable full-stack applications with React, Node.js, and React Native. I'm seeking a final-year internship where I can apply my experience developing production-ready features and contributing to impactful user experiences

EDUCATION

Engineering – Software Engineering

EPI Sousse
2023–2026

Bachelor's in Electrical Engineering – Automation & Industrial Computing

Higher Institute of Technological Studies of Mahdia
2020–2023

Baccalaureate in Experimental Sciences

Lycée Ibn Sina Mahdia
2019–2020

PROFESSIONAL EXPERIENCE

Insomea Technologies – Summer Internship – .NET Developer

2025

- Developed a secure web application to evaluate Microsoft 365 and Azure security levels.
- Integrated Microsoft Graph API and Azure SDK to audit cloud configurations. Worked with clients to identify
- Automated security checks using PowerShell and managed SQL Server / Azure SQL storage.

Quaratech – Full Stack Developer (Summer Internship)

2024

- Built a car rental platform with three user roles: admin, renter, client
- Implemented subscription system for renters with free trials, post limits, and email notifications.

ASM– Mobile Developer– Final Year Project Internship

2023

- Developed a mobile app for remote supervision and control of PLCs via MQTT.
- Conducted performance and reliability testing for industrial networks

PROJETS ACADÉMIQUES

House Rental Website: – End-of-Year Project

Technologies: **MongoDB, Express, React, Node.js**

- Implemented user authentication, property management, and booking functionalities.
- Integrated secure backend APIs and designed a scalable architecture to support multiple users (owners and tenants).

Java Desktop Application – Pharmacy Management:

Technologies: **Java, Swing, MySQL**

- Developed a desktop application to manage pharmacy operations, including inventory control, sales tracking, and customer record
- Implemented a user-friendly interface and optimized database interactions for efficient data handling

AI Disease Detection App

Technologies : **Flutter, TensorFlow/Keras, Flask**

- Developed a mobile application integrating an AI model to detect plant diseases.
- Trained a CNN model for image classification and implemented real-time predictions through a Flask backend API.

Cryptocurrency Price Prediction Model

Technologies: **Python, Pandas, NumPy, Scikit-learn, TensorFlow**

- Built a machine learning model to analyze cryptocurrency price trends and predict future values.
- Developed interactive visualizations to display historical trends, predicted prices, and confidence intervals.

LANGUAGES

- Arabic: Native
- French: Fluent
- English: Fluent

TECHNICAL SKILLS

- Programming: Java, JavaScript (Node.js)
- Frontend: React.js, React Native, Tailwind CSS, Flutter
- Backend: Express.js, Spring Boot Databases: MongoDB, MySQL
- DevOps & Cloud: Docker, Azure Synapse Analytics
- Business Intelligence: Power BI
- AI & Machine Learning: NLP, Deep Learning
- Testing & Tools: Selenium, Postman, Git
- UI/UX Design: Figma
